

1. Hello World Write a C program to display the message "Hello, World!" on the screen.

- **Input:** None
- **Output:**

Hello, World!

2. Print Your Name Write a C program to print your name and a message saying that you are learning C programming, using two separate printf statements.

- **Input:** None
- **Output:**

My name is Ravi.

I am learning C programming.

3. Using a Variable Write a C program that stores your age in a variable and displays it using printf.

- **Input:** None
- **Output:**

My age is 20

4. Taking Input from User Write a C program that asks the user to enter their age and then displays it back to them.

- **Input:**

25

- **Output:**

Enter your age: 25

You are 25 years old.

5. Simple Addition Write a C program to add two fixed numbers (defined in the code) and display their sum.

- **Input:** None
- **Output:**

Sum = 8

6. Add Two Numbers Entered by User Write a C program that takes two numbers as input from the user, calculates their sum, and displays the result.

- **Input:**

15 27

- **Output:**

Enter two numbers: 15 27

Sum = 42

7. Swap Two Numbers Using a Third Variable Write a C program to swap the values of two variables using a third (temporary) variable, and display the values before and after swapping.

- **Input:** None (values fixed in code: a = 5, b = 10)
- **Output:**

a = 10, b = 5

8. Area of a Rectangle Write a C program that takes the length and breadth of a rectangle as input from the user and calculates and displays its area.

- **Input:**

5.5 3.2

- **Output:**

Enter length and breadth: 5.5 3.2

Area = 17.60
